

A photograph of four diverse international students smiling and looking towards the right. The student in the foreground is wearing a black t-shirt with the text "don't quit your day dream." in white. The background shows a classroom setting with whiteboards.

Life Sciences International Semester

**Study Abroad in Hamburg –
Your gateway to the world**

Welcome to Hamburg - City on the water

In the North of Germany, in the heart of Europe - Hamburg is Germany's second largest city (1.8 million inhabitants) and offers our excellent quality of life and international flair. If you like to spend your leisure time outdoors, you will love Europe's »greenest« city with its large lake and numerous parks in the centre of town. You will also find culture in all its variations as demands a major city -

theatre, museums, exhibitions as well as music in concerts or in clubs. Hamburg is an international harbour city and a great place to live and study. Make it your gateway to the world.

„The best thing about study abroad are the people“ Lucy Kellow & Samantha Beasley

Nutrition and Health

Didactic concept at the HAW Hamburg

The Hamburg University of Applied Sciences (HAW) being an applied science university has a long standing tradition of using practical and interactive teaching methods. Taking into account the diverse cultural and professional backgrounds of the international students, the professors and academic staff of the HAW are committed to a participatory learning atmosphere. Students are expected to learn through both directed and self-directed study. The timetable of formal teaching will be supplemented by practical application in the form of a group or project work and/or laboratory test which each student will be required to develop using the methods and concepts learned during the course. The teaching programme is structured to accommodate a range of learning experiences through:

- Interactive lectures providing a broad introduction to a subject and referring to relevant literature and offering guidance on further inquiry;
- Group work and workshops enabling an in-depth analysis of selected topics and also the learning of different soft skills;
- Seminars and plenary discussions activating students to share their ideas and experience in order to deepen the understanding of concepts and theories; and
- Case studies and project-based learning promoting the development of skills particularly relevant for the workplace.
