Nutrition and Health
- Courses in English -

- Consumer Behaviour
- Communal Catering Services
- Food Marketing
- German Food & Culture*
- International Human Resource Management
- Marketing Research
- Nutrition Behaviour
- Project Management
- Public Health Project Intercultural Intelligence
- Scientific Ergonomics with lab
- Sensory Analysis
- Sports Nutrition **
- Sustainable Energy Economics
- Working in multi-cultural groups
- German
- Academic English (for non-native speakers)

* max. 20 participants
** blocked course

(Faculty of Life Sciences; December 2019)
## Course Name: Consumer Behaviour

**Degree programme:**
**Nutrition & Health** (Bachelor)

**Responsible Lecturer:**
Prof. Dr. Stephan Meyerding

**Work load:** 150

**Lecture hours per week:** 4

**ECTS Credits:** 5

### Course objectives:
Students acquire a deep understanding that...

- We use products to help us define our identities
- The society we live in today can be described as a consumer society
- Brands have become the most important symbolic vehicles in the marketplace
- The ethics of consumption is becoming more and more significant, both for consumer well-being and as sound business
- Many factors at the time of purchase dramatically influence the consumer's decision-making process
- The design of a product today is a key driver of its success or failure
- We interpret the stimuli to which we pay attention according to learned patterns and expectations
- The self-concept strongly influences consumer behavior
- Society's expectations of masculinity and femininity help to determine the products we buy to meet these expectations
- The way we evaluate and choose a product depends on our degree of involvement with the product, the marketing message, and/or the purchase situation
- A lifestyle defines a pattern of consumption that reflects a person's choice of how to spend his or her time and money, and these choices are essential to defining consumer identity
- Psychographics go beyond simple demographics to help marketers understand and reach different consumer segments
- Understanding attitudes is important to consumer researchers
- Persuasion can change attitude
- The three categories of consumer decision-making are cognitive, habitual, and affective
- The way information about a product choice is framed can prime a decision, even when the consumer is unaware of this influence
- Other people and groups, especially those that possess social power, influence our decisions
- Word-of-mouth communication is the most important driver of product choice
- Social media changes the way we learn about and select products
- Many important demographic dimensions of a population relate to family and household structure
- Our membership in ethnic, racial and religious subcultures often guide our consumption behavior

### Contents:
1. An Introduction to Consumer Behavior
2. A Consumer Society
3. Shopping, Buying and Disposing
4. Perception
5. The Self
6. Motivation, Lifestyle and Values
7. Learning and Memory
8. Attitudes
| 9. Individual Decision-making |
| 10. Group and Social Media |
| 11. European Structures, Decision-making and Aging |
| 12. Income and Social Class |
| 13. Culture and Consumer Behavior |
| 14. Cultural Change Processes |
| 15. Consumption and European Consumers |

**About didactics and work load distribution:**
60% problem-based learning and group work; 40% lectures - 60 hours classes, 90 hours personal study

**Requirements for participation:**
None

**Type of exam:**
Exam

**Requirements for credit point allocation:**
Active participation in class and exam

**Literature:**
**Course Name:** Communal Catering Services

**Course objectives:**

- describe the mission statement of communal catering services
- evaluate the different specialized food systems like cook and serve, cook and chill etc.
- describe the different serving systems and to decide which are adequate for the respective setting
- describe equipment and decide the adequate technology based on the different demands
- know nutritional quality standards for guests in different institutions and can apply them
- develop and implement specific measures for sustainable and health-promoting food service
- check hygiene procedures based on legal requirements
- implement quality assurance and improve continuously

**Contents:**

- The communal catering and food service market
- Specialized systems like cook and chill, cook and serve, cook and freeze, sous vide etc.
- Transport, storage, distribution and service of meals
- Sustainable and health-promoting menu planning
- Basic conditions of food supply in different institutions like kinder gardens, schools, nursing homes, canteens and hospitals.
- Specific nutritional standards for different target groups
- Food and Nutrition Action Plan of Europe and Germany – consequences for catering
- Quality- and hygiene management
- Nudging in the food service sector
- SDG’s and sustainable nutrition in catering business

**About didactics and work load distribution:**

Presentations, working in small groups, discussions, visits to different institutions

**Requirements for participation:**

Basic knowledge of nutrition science

**Type of exam:**

Written test – multiple choice

**Requirements for credit point allocation:**

Successfully passed written examination, participation in group work and presentations

**Literature:**

</tr>
</thead>
</table>

### Course Objectives:
- Comprehension of the food market.
- Students will get an insight into the development of integrated marketing concepts for food products.
- Students will gain knowledge in planning and in the implementation of marketing instruments for food products.
- Students will gain confidence in the assessment of the advantages and disadvantages of options regarding the use of marketing methods.

### Contents:
- Specifics of the food industry
- Direct sales of food products
- Cooperative marketing in the food sector
- Retail marketing in the food sector
- Advertising for food products
- Branding and package design
- Customer loyalty and customer satisfaction

### About didactics and work load distribution:
50% case studies; 50% lectures

### Requirements for participation:
Basic knowledge in marketing would be helpful

### Type of exam:
Written paper and presentation or written examination

### Requirements for credit point allocation:
Active participation in class and case studies; incl. written short papers

### Literature:
Case studies
# German Food and Culture

**Degree programme:** Nutrition & Home Economics (Bachelor)  
**Responsible Lecturer:** Dipl. oec. troph. H. Koopmann  
Tarek Butt

| Work load: 150 | Lecture hours per week: 4 | ECTS Credits: 5 |

## Course objectives:
- The module contains a culinary journey throughout Germany.
- Students will find out about German favorite foods and beverages today and in the beginning of the last century.
- It will be reasoned in which way living and eating in Germany has changed and which international influence has taken place during the last 50 years.
- Students will prepare German traditional meals and will investigate the history of the recipes.

## Contents:
- Development of consumer demand during the last century
- International Influences of eating behavior in Germany
- Development of Food production and processing
- Regional differences in German culture
- Preparing of typical German dishes
- History of the recipes German traditional meals
- Market overview, consumption, price comparisons

## About didactics and work load distribution:

Scientific project

### Requirements for participation:
- active participation in group work;
- max. 20 participants

### Type of exam:
- 75% presentation of project works / 25 % survey report

### Requirements for credit point allocation:
- Active participation in group work and lessons

### Literature:

**Course Name:** International Human Resource Management

**Degree programme:** Nutrition & Home Economics (Bachelor)

**Responsible Lecturer:** Prof. Dr. Birgit K. Peters

**Work load:** 150

**Lecture hours per week:** 4 (Blended Learning*)

**ECTS Credits:** 5

**Course objectives:**

The blended learning course "International Human Resource Management" includes five workshops. **Students who sign up for the course have to attend a minimum of four lessons to get the Examination credits.** The topics are about International Human Resource Management with the focus on Communication, Compensation and Benefits, Motivation, Leadership, Training and Development. We are going to look at the topics from different perspectives and countries.

**Content:**

- Strategic HRM / HRM strategies
- International Employee relations
- Basic Communication Skills
- Performance Management
- Motivation theories
- Basics of Leadership & Leadership Instruments
- Leadership Styles
- Training and Development
- Organizational behavior

**About organization, didactics and work load distribution:**

There are no regular weekly lectures. The course is a *blended learning course.*

**Course structure:**

Workshop 1 – Self-study Phase and work package 1 – Workshop 2 – Self-study Phase and work package 2 – Workshop 3 – Self-study Phase and work package 3 – Workshop 4 – Self-study Phase 4 – Workshop 5

For each workshop, two or more teams will be asked to prepare a workshop, which they present to the total group. All work packages must be completed as a team in the individual groups.

**Requirements for participation:**

Students should have some prior knowledge of the field of human resource management.

**Course language:** English

**Type of exam:**

Grading of each component of the course as described below.

**Requirements for credit point allocation:**

- attendance of four of the five workshops is mandatory
- successful completion of the three work packages (e.g. presentation, research poster, case study, video)
- work on a workshop as a team with presentation in the course

Course Name: Market Research

Degree programme: Nutrition & Health (Bachelor)

Responsible Lecturer: Prof. Dr. Stephan Meyerding

Work load: 150 Lecture hours per week: 4 ECTS Credits: 5

Course objectives:
► To understand the function and uses of marketing research
► To learn the different types of marketing research firms and the industry structure
► To gain insights into marketing research by learning the steps in the marketing research process
► To understand the difference between the problem and the research objective
► To understand what research design is and why it is significant
► To learn how exploratory research design helps the researcher gain a feel for the problem by providing background information, suggesting hypotheses, and prioritizing research objectives
► To know the fundamental questions addressed by descriptive research and the different types of descriptive research
► To explain what is meant by causal research and to describe types of experimental research designs
► To understand the advantages and disadvantages of secondary data
► To understand basic differences between quantitative and qualitative research techniques
► To become knowledgeable about the details of different types of survey data collection methods, such as personal interviews, telephone interviews, and computer-administered interviews, including online surveys
► Understand basics of measurement people, places, and things
► Examine three scale formats commonly used
► To learn the dos and don'ts of question wording
► To become familiar with sample design terminology
► To be able to develop a sample plan
► To become acquainted with data quality errors and how to handle them
► To appreciate the five basic types of statistical analysis used in marketing research
► To learn how to obtain descriptive statistics with SPSS
► To be able to test the differences between two percentages or means for two independent groups
► To learn how to obtain and interpret cross-tabulations, Chi-square findings, and correlations with SPSS
► To learn how to obtain and interpret multiple regression analysis with SPSS
► To learn the basic guidelines for writing effective marketing research reports

Contents:
1. Introduction to Marketing Research
2. The Marketing Research Industry
3. The Marketing Research Process and Defining the Problem and Research Objectives
4. Research Design
5. Secondary Data and Packaged Information
6. Qualitative Research Techniques
7. Evaluating Survey Data Collection Methods
8. Understanding Measurement, Developing Questions, and Designing the Questionnaire
9. Selecting the Sample
10. Determining the Size of a Sample
11. Dealing with Field Work and Data Quality Issues
13. Implementing Basic Differences Tests
14. Making Use of Associations Tests
15. Understanding Regression Analysis Basics
16. The Research Report

**About didactics and work load distribution:**
60% problem-based learning and group work; 40% lectures - 60 hours classes, 90 hours personal study

**Requirements for participation:**
None

**Course language:**
English

**Type of exam:**
Exam

**Requirements for credit point allocation:**
Active participation in class and exam

**Literature:**

**Course Name:** Project Management

**Degree programme:**
*Nutrition & Home Economics* (Bachelor)

**Responsibility Lecturer:** Prof. Dr. C. Wegmann

**Work load:** 150
**Lecture hours per week:** 4
**ECTS Credits:** 5

**Course objectives:**
- To plan separate projects and to apply the instruments of the project management
- To work as a project manager in a small up to middle-sized projects
- To work client orientated in projects
- To recognise critical situations in the project management

**Contents:**
- Definition of project aims and scope
- Context analysis
- Project workflow planning with critical path method
- Resource and cost planning
- Project organisation
- Project controlling
- Roles and responsibilities
- Leadership and conflicts
- Use of project management software (MS Project)

**About didactics and work load distribution:**
- Teaching and discussions (50%),
- Group work (case studies), student presentations (50%)

**Requirements for participation:**
- None

**Type of exam:**
- Written examination or
- Presentation, written summary, three learning diaries

**Requirements for credit point allocation:**
- Successful completion of written exam at the end of the semester or
- Presentation and written paper and three learning diaries

**Literature:**
Course Name: Public Health Project

Degree programme: Health Science (Bachelor)

Responsible Lecturers: Wiebke Bendt & external lecturer

Workload: 150 Lecture Hours per week: 4 ECTS Credits: 5

Course objectives:
The objective of the course is to acquire the conceptual understanding and hands-on skills required to respond to the challenges of interactions in multicultural contexts, from a public health perspective. Upon successful completion of the module, students will be able
- To distinguish between different approaches to culture.
- To become aware of their participation in intercultural exchange and the influence of their own culture.
- To apply tools that facilitates intercultural communication and relation.
- Understand the interaction of social determinants, esp. culture, on the health and well-being.
- To design a persuasive project proposal and to present it to potential stakeholders.

Contents:
- Theories of culture and intercultural communication
- Model of intercultural learning
- Reflection on cultural attitudes and belief
- Project management in work with interdisciplinary and multi-cultural teams
- The relevance of culture for health and well-being for individuals and communities

About didactics and workload distribution:
- Project work, problem-based learning and student presentations
- 72 contact hours, 78 hours home and fieldwork

Requirements for participation:

Course language: English

Type of exam:
- Student presentations; developing and presenting a project proposal

Requirements for credit point allocation:
Active participation in the self-reflection process and collaboration with students from other regions and cultures; acknowledgement and respect of differences in the participants regarding gender, culture and region; working and researching autonomously and in teams and use different media for result presentations.

</table>

**Course objectives:**
- Students gain scientific expertise through a combination of theoretical and practical knowledge
- Students acquire general competence by combining expertise on the systems Human – Health – Work

**Contents:**
- 9 experiments: workplace evaluation, work organization, electrocardiogram, electromyography, ergospirometry, lifting and carrying of loads, working surrounding (noise, climate, lighting), bioelectrical impedance analysis, occupational skin protection
- Ergonomic project
- Scientific work

**About didactics and work load distribution:**
- Students conduct 9 experiments in our laboratory
- Students choose a scientific project related to the ergonomics and work on it in a seminar

**Requirements for participation:**
- Basic knowledge of scientific work

**Type of exam:**
- Written examination

**Requirements for credit point allocation:**
- Participation in group work
- Participation in lab work

**Literature:**
- Experiment instructions
- Specific literature according to the project
## Course Name: Sensory Analysis

### Degree programme: 
**Nutrition & Home Economics** (Bachelor)  
**Responsible Lecturer:** Prof. Dr. Andrea Bauer

### Work load: 150 hours  
**Lecture hours per week:** 4  
**ECTS Credits:** 5

### Course objectives:  
- Students will be able to select and train panellists for sensory evaluation, and monitor panel performance.  
- Students will be familiar with the planning, and the execution of sensory tests, both with and without having hard- and software for sensory evaluation at hand. This includes the selection of appropriate sensory methods, the statistical analysis of the data, and the interpretation and communication of the results.

### Contents:  
- Introduction to sensory perception (physiology)  
- Panellist selection and training, screening tests; threshold testing, testing colour and texture perception of panellists, perception of aroma qualities  
- Setting up a sensory laboratory  
- Descriptive methods  
- Discrimination tests  
- Hedonic / affective tests  
- Sensory methods for application in quality management  
- Statistical methods for data analysis, interpretation of the results  
- Introduction to software for sensory data collection and data analysis  
- Documentation of sensory tests

### About didactics and work load distribution:  
The workload comprises 60 hours of lecturing and 90 hours of independent study. During the lectures the theoretical background is provided, and students conduct sensory tests with a wide array of food products. The data collected during these tests are statistically analysed and interpreted in an interactive, easy-to-follow way.

### Requirements for participation:  
Participants should ideally have some basic knowledge in statistics

### Type of exam:  
- Written exam at the end of the course  
- Participants need to write 2 short reports (not marked) on sensory tests of their choice and design a short FIZZ-session (not marked) for sensory testing throughout the course

### Requirements for credit point allocation:  
Compulsory attendance of lectures and classes and successful completion of the exam

### Course language: English

### Literature:  
## Course Name: Sports Nutrition

**Degree programme:** Bachelor  
**Responsible Lecturer:** Prof. Dr. Anja Carlsohn  
**Additional Lecturer:** Prof. Dr. Sibylle Adam  

<table>
<thead>
<tr>
<th>Work load: 150 h</th>
<th>Lecture hours per week: 4</th>
<th>ECTS Credits: 5</th>
</tr>
</thead>
</table>

### Course objectives:
The course aims to empower students to gather evidence-based information and recommendations regarding physical activity, nutrition and sports nutrition. Students will be able to identify exercise-related special needs and requirements in athletes as well as to provide evidence-based nutritional counselling to the given target group (i.e. physically active subjects of different age groups, recreational and competitive athletes, elite athletes). Students will be aware of diet-related health risks in athletes and able to identify athletes at risk as well as to develop strategies for prevention of these health risks.

### Contents:
- Physical activity recommendations and definitions of “athletes”  
- Methods in sports nutrition (e.g. measurement of energy requirements, assessment of energy availability and body composition, assessment of hydration status)  
- Diet-related health risks in athletes and tool to screen or identify athletes at risks (e.g. RED-S and/or female athlete triad, exercise-induced hyponatremia, dehydration, iron deficiency, gastrointestinal distress, eating disorders)  
- Evidence-based recommendations and practical solutions for recreational and elite competitive athletes in endurance sports, power sports, team sports, weight class and weight sensitive sports  
- Recent controversies and research approaches in sports nutrition (e.g. vegan diets, ketogenic diets, techniques for low glycogen training, intermitted fasting, mouth rinsing and carboloading techniques, cooling strategies)  
- Application of different methods and screening tools in sports nutrition including the development of individualized evidence-based dietary recommendations or recommendations for the catering in mass sports events

### About didactics and work load distribution:
The course will combine lectures and workshops including developing practical skills. Respective guest lecturers will be invited. Total workload will approximate 150 hours, with 78 hours independent study.

### Requirements for participation:
- basics in human nutrition or equivalent course  
- physiology or equivalent course  
- scientific working or equivalent course

### Course language:
English

### Type of exam:
Written exam or report

### Requirements for credit point allocation:
Passing the workshop tasks and exam/report
Literature:

Recent peer-reviewed articles and position statements regarding sports nutrition (German Nutrition Society, American College of Sports Medicine, International Olympic Committee)
# Sustainable Energy Economics

**Degree programme:** Nutrition (Bachelor)  
**Responsible Lecturer:** Prof. Dr. Jörg Andreä

<table>
<thead>
<tr>
<th>Work load:</th>
<th>150</th>
<th>Lecture hours per week:</th>
<th>4</th>
<th>ECTS Credits:</th>
<th>5</th>
</tr>
</thead>
</table>

**Course objectives:**
This course looks at: the formation of fossil fuels; the development of the demand for energy in Germany and worldwide; the mechanisms of energy economics; an introduction to energy production and management; the future perspectives of the use of renewable energies; energy and the environment (global warming, etc.); sustainable energy concepts for the future.  
The target is for the participants to know, be able to describe and valuate Forms of Energy, Generation of Energy, Distribution of Energy, Applications of Energy, Energy Economics, Environmental Aspects, Future Concepts of Energy Supply and perform basic calculations.

**Contents:**
- From Big Bang to Presence  
- Energy Forms and Systems, Energy Cycle of Life  
- Energy Demand, Economics, Supplies  
- Conventional and Nuclear Power Plants  
- Electricity from Renewable Energy Sources  
- Future Perspectives: Nuclear Fusion, etc.  
- Applications of Energy  
- Energy and Environment  
- Energy Technologies for the Future (Presentations)

**About didactics and work load distribution:**
(72 hours lectures, 78 hours self-study)

**Requirements for participation:**
Basic knowledge of mathematics and physics, knowledge of English

**Type of exam:**
- Presentation on a Topic of „Energy Technologies for the Future” (30%)  
- Final Examination (written or oral test in English) (70%)

**Requirements for credit point allocation:**
Successfully passing the final examination; participation in the excursion to a power plant

**Course language:** English

**Literature:**
Course Name: Working in Multi-cultural Groups

Degree programme: Nutrition & Home Economics (Bachelor)  
Responsible Lecturer: Prof. H. Helker

Work load: 150  
Lecture hours per week: 4  
ECTS Credits: 5

Course objectives:
- Repetition and immersion of classic methods of group work and their application in a multicultural context.
- Course objective is to raise the students' level of awareness of the differences in communicative practices in different Cultures and the consequences these differences might have in intercultural communication.
- The course will encourage the students to be critical about stereotypes in language and thinking. The course will help students to identify and understand the meaning of multiculturalism as a process in team building and work in a multicultural working environment.

Contents:
- Applying classic techniques of group work, the course looks into the development of practical skills.
- Theory and practice of team management – team building, leading, conflict management.
- Theory of cultural differences in communicative practices taking into account both verbal and non-verbal communication.

About didactics and work load distribution:
- Seminar, Group Work, Project Work and Student Presentations, Electronic Platform for Blended Learning, Intercultural Training

Requirements for participation:
- Basic knowledge in social psychology

Type of exam:
- presentation of group work and written report

Requirements for credit point allocation:
- Regular attendance and active participation, presentation of group work and written report

Course language: English

Literature:
