WINTER SCHOOL ON GLOBAL HEALTH AND SCIENCE COMMUNICATION

WHAT

An online course incorporating skills-building workshops and impulse sessions on global health

LANGUAGE

English

WHEN

Weekends (Friday to Sunday; see preliminary schedule), 22 Oct to 12 Dec 2021

PRELIMINARY SCHEDULE

Available at: <https://bit.ly/3sloSzb-Informationpage>

WHERE

Online via digital conference tools

TARGET GROUP

Advanced bachelor's and master's students in health science disciplines worldwide

REGISTRATION DEADLINE

26th September 2021, 23.59 CEST hrs

COST

900 Euro

SCHOLARSHIPS

Available for all the participants to cover cost of course.

Apply Now!

GLOBAL HEALTH

The term Global Health signifies the evolution of public health and international health in the face of increasing globalisation, determinants of health with relevance across national borders, existing and emerging health challenges, and issues of national and international health governance. The concept considers health a universal good and equitable access to healthcare a human right. Research, awareness-raising, and advocacy for global health are more important now than ever before and call for close and intensive international cooperation and communication.

The communication of science and research to the public and relevant stakeholders is crucial in our age; yet communication that does not effectively address the needs of its audiences will not achieve its objectives. The dissemination of research findings to fellow experts via fora such as scientific papers and conferences remains a vital component of science communication. Alongside these channels, new and innovative formats such as short videos, podcasts and science slams have the potential to make scientific knowledge accessible and appealing to a much wider audience. It is against this backdrop that we are holding an international virtual Winter School as a forum for discussion of issues such as:

- What are the social dimensions of global pandemics?
- What is digitalisation in public health supposed to do, what is it capable of doing, and where are its limits?
- Why do endeavours to reduce global-scale threats to health call for a better understanding of the interactions between human, animal, and ecological health?
- Why is climate change a global health crisis?
- How can we, as global health stakeholders, communicate more clearly and effectively on the scientific issues surrounding health to policymakers and the general public?

The intent of the Winter School is to link the two fields of global health and science communication.

We have carefully selected the topics of the academic ideas sessions to address the various interests of our international participants and harness the potential of our diverse background and experiences they bring to the group. We intend them to inspire you and provide insights into some current global health challenges and potential solutions. The workshops will complement the ideas sessions by enabling participants to practise their skills in activities designed around the topics discussed.

The host of this online Winter School is Hamburg University of Applied Sciences (HAW Hamburg), Germany's third largest institution of its kind. We are looking forward to welcoming students from all over the world to connect and share ideas, insights, and inspiration in an international and intercultural atmosphere.

The participants will be awarded certificates on successful completion of the online course.

This Winter School is generously funded by:
German Academic Exchange Service (DAAD)
