**Lênia Ribeiro de Souza Vieira,** Quality Assurance Service- QAS, Brazil

**Youssef Ahmad Youssef,** Humber Institute of Technology and Applied Learning, Canada

# Brazilian Journal of Science and Technology

The *Brazilian Journal of Science and Technology* is a brand new peer-reviewed open access journal published under the brand SpringerOpen.

The *Brazilian Journal of Science and Technology* showcases research in the broad field of science and technology (including such disciplines as Agriculture, Biotechnology, Energy Policy, Environmental Studies, Materials Science, and Sustainable Development), with particular respect to Brazil and greater Latin America, but not limited to authorship or topical coverage within the region. The journal explores the dynamics of Research & Development (R&D) under a wide perspective, including not only an emphasis on dissemination of research findings, but also on policy-making and economic growth.

Contributions are expected from senior researchers, project managers, research administrators and PhD students at advanced stages of their research, representing both public organizations and private industry. Similarly, the journal is intended for scholars and students, staff working at research organizations and government agencies, and also for enterprises undertaking applied R&D to drive innovations. The journal provides a unique platform for both contributors and readers since it focuses on the substantial potential of R&D in a rapidly growing region, with implications for other emerging regions around the world.

The journal will occasionally produce special issues on state-of-the-art, interdisciplinary themes that are mainstream in Brazil and elsewhere.

As far as the criteria for evaluating and accepting submissions is concerned, a rigorous review process will be used. Submitted papers will, prior to the formal review, be screened so as to ensure their suitability and adequacy to the journal. In addition, an initial quality control will be performed, so as to ensure matters such as language, style of references and others, comply with the journal's style.
